Introduction

The Building Safety Group are an accredited and leading training provider of the NEBOSH National Certificate in Construction Health and Safety qualification.

Who is it for?

Supervisors, managers and CDM co-ordinators within the construction industry who are required to ensure that activities under their control are undertaken safely. The qualification is also appropriate for supervisors working in other industries such as utilities, and even broadcasting, where temporary workplaces are a feature of their activities.

The programme of study is more comprehensive than the National General Certificate. Due to the specific nature of the course, not only will general health and safety issues be covered, but there will be more emphasis placed on specific construction issues that make the industry amongst the most dangerous in which to work.

What are the benefits for the employer?

Many larger construction organisations choose the NEBOSH National Construction Certificate as a key part of their supervisory or management development programme. By ensuring that line managers have a sound understanding of the principles of risk management they build an effective safety culture in the company.

Owners or managers of smaller consultancy companies will find this qualification helps them to meet the requirements of clients and principal contractors when working on other people's premises or sites.

Length of Study?

The 20 units are run over 15 days with an extra 3 days for practical assessment and examinations. We take this time to ensure a fantastic pass success rate – in fact, many students walk away with credits or distinctions.

How is the course assessed?

At the end of the course there is one practical assessment and two 2-hour written examinations.

- The practical assessment consists of carrying out a health and safety inspection of a construction site, or part of a site, and preparing a management report.
- Paper 1 ('The management of safety and health in construction work') addresses primarily Units 1-9.
- Paper 2 ('Controlling construction workplace hazards') addresses primarily Units 10-20.

National Certificate in Construction Health and Safety

Course Programme

Unit		Unit
